Summary

Computer Science undergraduate (B.Tech, graduating 2027) with a strong foundation in Data Structures & Algorithms, OOP, DBMS, Operating Systems, and Computer Networks. Experienced in building backend and full-stack applications with Java, C++, JavaScript, Node.js, REST APIs, and SQL/NoSQL databases, with an emphasis on clean, scalable, and reliable software engineering practices — aligned with EPAM's engineering standards and Agile delivery model.

Education

LNCT Group of Colleges – RGPV University
B.Tech in Computer Science and Engineering

Bhopal, India
Sep 2023 – May 2027

Technical Skills

Languages: C++, Java (basic), JavaScript, SQL
CS Fundamentals: Data Structures & Algorithms, OOP, Complexity Analysis, DBMS, Operating Systems, Computer Networks
Backend/Web: Node.js, Express.js, React.js, REST APIs, WebSockets, Socket.IO, JWT
Databases/Tools: MySQL, MongoDB, Pinecone, Git, GitHub, Postman, Agile/Scrum

Experience

Oasis Infobyte (AICTE Recognized)

Web Development Intern

Remote, India
Jul 2025 – Oct 2025

- Developed full-stack applications using the MERN stack, focusing on scalable architecture, performance, and production-ready features.
- Built RESTful APIs with Node.js/Express.js and integrated them with React.js applications for efficient client-server workflows.
- Collaborated in an Agile environment using Git-based version control and code reviews to deliver production-ready features.

Projects

Enterprise RAG Knowledge Platform | *React.js, Node.js, Express.js, MongoDB, OpenAI API, Pinecone, JWT*

- Architected a full-stack Retrieval-Augmented Generation platform enabling document upload, chunking, embedding generation, and semantic vector search over Pinecone.
- Built an Express.js/Node.js backend integrating the OpenAI API to generate LLM-powered answers with source/document citations, and implemented streaming AI responses for low-latency chat.
- Designed JWT-based authentication with role-based document access control, and persisted conversational chat history in MongoDB across multi-session users.
- Added user feedback capture and query/search analytics to support answer-quality monitoring and continuous improvement of retrieval relevance.

Predictive Pulse Analysis | *Python, Scikit-learn*

- Developed a blood-pressure prediction model achieving 92% accuracy through feature engineering and model tuning.
- Applied data preprocessing, statistical analysis, and optimization techniques to improve model reliability on real-world datasets.

Research & Publication

Prompt Injection in AI Chatbots: Security Risks and Defense Mechanisms | *ICAEST 2026*

- Investigated prompt injection vulnerabilities in LLM chatbots including Amazon Rufus, ChatGPT, and Microsoft Copilot; designed an evaluation framework to assess adversarial attack impact.

Achievements

Competitive Programming: Solved 300+ DSA problems across LeetCode, GeeksforGeeks, and CodeChef, with focus on algorithmic problem solving and complexity analysis.

Hackathons: Cleared Hack With Infy Round 1 (Greedy & Dynamic Programming); participated in Smart India Hackathon with national-level recognition.

Certifications: Google Cloud Generative AI, Cisco Cybersecurity Essentials.
